

amenotec provides extension to Tornado Business Center from Intergral Software

Bocholt, 6th May, 2003. As of now, amenotec GmbH's knowledge management technology offers an extension to the web-based information portal Tornado Business Center of Intergral Software GmbH. Tornado combines and organises information on the basis of a business data model to provide individuals, workgroups and business partners with relevant information via the web. The knowledge management technology developed by amenotec searches for and classifies documents in terms of associative links. Integration of this technology with Tornado makes for an automated classification of documents by topics and their immediate availability to users.

Within Tornado, there are already pre-configured "Business Knowledge Channels". These channels organise information on the basis of a freely definable business data model. They make for the personalisation of intranet, internet and extranet environments and ensure business process relevant information is available to the staff that needs to deal with it and, moreover, to business partners. Amenotec technology is employed to automate assignment of documents to channels in terms of associative links. This extension is a particularly desirable thing to have when Tornado is deployed for the first time in a company, as it frees the user of the burden of having to assign the whole lot of existing documents manually. Instead, amenotec makes for their automatic classification by categorising them in terms of the data content and the given associations.

On top of that, amenotec's semantic search adds to the navigation facilities that are there already in Tornado Business Center (full text and structured search). In response to a search term, the user is now also displayed those documents that are related to the search term by an associative link.

System requirements:

- Browser:

- Microsoft Internet Explorer Version 5.5 (or higher)
- Netscape Navigator 7.0
- Operating Systems:
 - Microsoft Windows NT 4/2000
 - Red Hat Linux 6.2 - 7.2 or
 - SuSE Linux 7.2, 7.3
 - Sun Solaris 7 / 8
 - HP-UX 11.0
- Data Base Systems:
 - Microsoft SQL Server 2000
 - Oracle 8i / 9i
 - IBM DB2

About amenotec GmbH:

Bocholt-based Amenotec GmbH is a developer and provider of innovative knowledge management technologies. The company employs 25 people. Its CEOs are Wolfgang Aigner, Ivo Leunig and Dr. Klaus Holthausen. The range of products includes IT solutions for search engines, pattern recognition and classification of data. The technology developed by Dr. Holthausen maps unstructured digital information into an associative organisation to expand usability and to make for more efficient data management. Its interfacing allows for quick and easy integration of the technology with existing information and knowledge environments. It thus provides an easy way to add value to other document and content management systems.
